- Architectural Designs
- Development
- QA Manual and Automated
- Production Support

How can we help you

- Providing development support for your current company areas
- Doing external developments for your needs
- IT Consultancy
- Providing teams in a different timezone

Success Cases

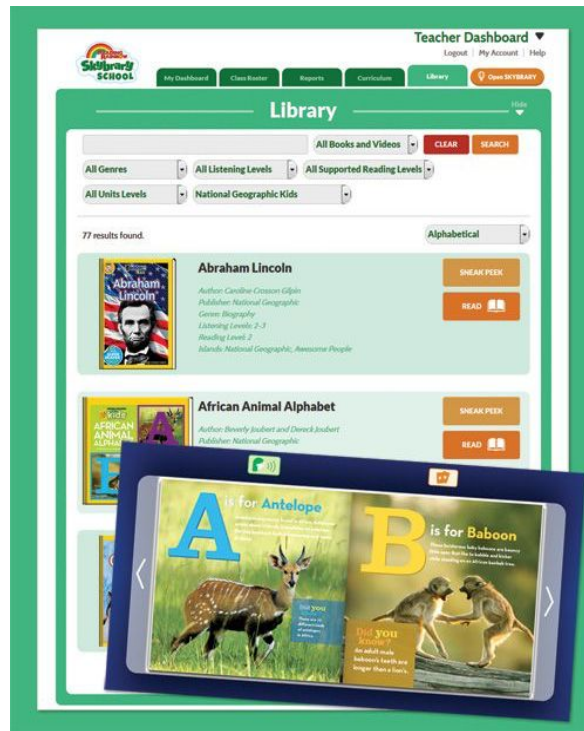

- **EA Monitoring wall:** we built an Integrated Monitoring platform using Open Source tools Symphony and Graphite, we created a dashboard on top of them that graphs different metrics, detects tendencies and alerts the incumbent studios. This helped EA on their Network Operations Center in streamlining their operations saving them near a million dollars a year.

- **RRKIDZ:** We leveraged a change in Apple's billing practices and built a billing and subscription platform using Drupal and Stripe, this saved them about 30% in App Store commissions, increasing their revenue. As a byproduct of the new Drupal platform, they started to move their iOS app to the Web with an HTML5 Application.

- RRKIDZ EDU:** We built a web Educational Platform with Drupal to provide content for Schools, Teachers and Kids in the US and Canada. The challenge was to integrate the content into their legacy platform with the new platform. In order to do it we created a middleware also using Drupal.

- UNICEF Kid Power Program:** We did a complete development of the backend for the Kid Power Application, this is an application for kids that using a activity tracking band tracks all the kid activity and depending on the activity he can contribute to release therapeutical food packages called RUTFs that are sent to countries in need such as Africa, Haiti, Burkina Faso, and others. We also work on all the websites to support their marketing campaigns.

- **HITN:** For their Cleo and Cuquin Learn and Explore App, we have worked in a backend to register users, make purchases or redeem codes to unlock new game episodes and more adventures. We did a large work to accomplish COPA and ESRB regulations.

- **Men's and Fitness:** Is a magazine about health and men appearance, they had a Drupal 6 site running and wanted to move to Drupal 7 in order to upgrade the site for security and scaling. We build the new site, migrated the content, moved the site to AWS and this site is currently handling near of 6000 concurrent users and with more than 5.000.000 of monthly visitors around the world. This volume of traffic was challenging to handle so we carefully crafted the architecture of the site, adding several layers of caching to improve the performance at a lower cost.

- **Radar Online:** Gossip site for the Hollywood world, they had a new design for the current WordPress site. We worked in the migration of the old site to the new WordPress, worked in the theming and the Advertisement management platform.
- **FLEX:** We worked in the migration of their Video Platform, they used AOL as a platform and we moved all the content from AOL to JWPlayer, this was a huge job, more than 100.000 videos were moved from one platform to the other and several places of the site where improved to use the new player.
- **EA Custom Reports:** We reduced expenses in man hours and licenses cost by replacing their report application that did not fully comply with their information needs. We created a distributed system using Symfony to integrate more than 10 different sources and display accurate information on the availability of services.
- **Cencosud Shop:** The largest shopping brand in Chile, we worked with other agencies creating a platform to manage their Shoppings contents, right now ten and counting, from a single admin site and doing replication of the content to the affiliated sites.

Timezones

We are available in GMT -3 (Resistencia Chaco, Argentina), and GMT -7 (Los Angeles, California).
